OUR DRIVES FOR FEED MIXERS AND BIOGAS PLANTS

With over 50 years of engineering experience in the agricultural market, Reggiana Riduttori has developed a dedicated line of **planetary gearboxes for the rotation of the feed mixers and biogas plants.**

These rugged units are easily installed on wagons, selfpropelled and stationary machines for feeding and biogas operations.

All our gearboxes are produced with European top-quality materials before being assembled and tested at our headquarters in Italy.

Our range of planetary gearboxes provide high performances output with compact dimensions and generous peak torque capabilities while maintaining a compact foot print.

Our modular design, comprehensive ratio availability and customizable configurations enable Reggiana Riduttori to realise the most suitable solution for our customers.

Con oltre 50 anni di esperienza ingegneristica nel mercato agricolo, Reggiana Riduttori ha sviluppato una linea dedicata di riduttori epicicloidali per carri miscelatori e impianti biogas.

Queste robuste unità sono facilmente installabili su carri, macchine semoventi e fisse.

Tutti i nostri riduttori sono prodotti con materiali europei di prima qualità prima di essere assemblati e testati presso la nostra sede in Italia.

La nostra gamma offre prestazioni elevate con dimensioni compatte e generose capacità di coppia di picco pur mantenendo un ingombro ridotto.

Il design modulare, la disponibilità di rapporti completi e le configurazioni personalizzabili consentono alla Reggiana Riduttori di realizzare la soluzione più adatta al cliente.

HYDRAULIC AND ELECTRIC
SYNCHRONIZED MIXERS
DRIVES

Our independent or synchronized mixerdrives are available with hydraulic and electric motor connections. The modular design permits additional pre-reduction stages to be added ahead of our right-angle section. The pre-stage allows for greater ratio flexibility for auger speed control. Our right-angle drives are also available with double PTO shaft, in order to drive an additional gearbox on dual screw designs.

M

MAIN FEATURES AND APPLICATIONS

- WIDE RANGE OF RATIOS
- LABYRINTH SEAL PROTECTION
- EASY MAINTENANCE
- HIGHEST CLEANING SPEED
- MIXING UP TO 22 M³ ON SINGLE SCREW
- MODULAR DESIGN
- ELECTRIC AND HYDRAULIC MOTOR CONNECTIONS AVAILABILITY
- HIGH PEAK TORQUE CAPACITIES
- GREASE OR OIL LUBRICATED UPPER BEARINGS
